The first HTML page designed for this project was the main page. This page required several different aspects of design. First linked the CSS page to the HTML for design of the page. This is done using href= . Beyond that we started with the actual fundamentals of the page.

The first page will show you the images of some chef's who work hard to give their best. This is done using img src tag. The other thing you'll find on the first page is the delivery form which has a couple of boxes which the user has to fill in order to get their food delivered and it won't allow a user to hit submit unless the proper information is filled. Upon ordering, the user is directed to a new page, confirming the order. The parameters are set in html and will not allow users to move on without these qualifications being met. Also there is contact info at the bottom too.

We link the pages to the home page using href tag. There are two pages- review page and the menu page. We added a link using href to make it clickable for the user. The review page, allows the user to go back to the homepage and/or go to the menu page which is page #3. This page prompts the user to submit a review with a couple of dropdown boxes with comment sections and allows the user to specify the location they ordered with.

After these two pages there is the option for the menu page. The menu page displays the choices for customers. With a simple suggestion box, the Customer allows the customer to input a suggestion for potential menu items.

Each page is set with a css page that provides text and borders for the items listed on each page. These include the text and border color.
